Calculation Method for TOCOM Index, etc.**(1) Calculation Method**

The aggregated total number of the weight percentage multiplied by the percentage change in price of each component.

(2) Weight Percentage

The weight percentage for each component shall be determined based on the size of the cash market (volume of imports in value, etc) and futures market (open interest in value).

(3) Reference Date

May 31, 2002 (the initial value of the Index is set at 100.00 based on the settlement price on that day)

(4) Contract Month Used for Calculation

The most liquid contract month (i.e: the fifth or sixth contract month)

(5) Contract Rolling Procedure

There is a period of five business days (Roll Period) each month, starting from the fifth business day to the ninth business day, during which contract months are rolled using the following weights applied to the fifth contract month and the sixth contract month.

- 1) On the first day of the Roll Period, 0.8 and 0.2,
- 2) on the second day of the Roll Period, 0.6 and 0.4,
- 3) on the third day of the Roll Period, 0.4 and 0.6,
- 4) on the fourth day of the Roll Period, 0.2 and 0.8; and,
- 5) on the fifth day of the Roll Period, 0.0 and 1.0.

(6) Review of Weight Percentage

The weight percentage shall be, in principle, reviewed once a year. Every year TOCOM will publish the weight percentage for the next period in late March, which will be applied from the first business day of June.
